## **1. Intro**

The Basics

Including Audio/Video

## **2. Outro**

## **1. Intro**

The Basics

Including Audio/Video

## **2. Outro**

- ▶ You say **yes**
  - ▶ ...
- ▶ I say

$$e^{j\pi} == 1?$$

1. You say goodbye
2. and I say

$$X(\omega_k) = \sum_{n=0}^{N-1} x(n) e^{-j2\pi kn/N} \quad (1)$$

Multimedia package test. Can you hear this?

Since so far only Adobe has implemented embedded AV playback, you will need to use Acrobat as the viewer (haven't tested on Windows, but on OS X neither Preview nor Skim could play them).

## **1. Intro**

The Basics

Including Audio/Video

## **2. Outro**

## General block title

An idea<sup>a</sup>

---

<sup>a</sup>don't use titles if not needed

## Example (ex. 1)

For example ...

## Alert title

Or an alert!

# Example of a table

Name	x	y
$\alpha$	8	10
$\eta$	9	9

You can also omit the footer of the page and reclaim that space

# How to include an image

You can insert images the traditional  $\text{\LaTeX}$  way

**Figure :** Who's logo is this?

# Absolution positioning

Or you can use absolute positioning with the `texpos` package

# Using columns in a frame

This is content of the first column. You can use as many columns as you like, using the `columns` environment in `beamer`

In the second column you can do what you like, like adding an image, for instance.

This is an extra slide, so it won't affect the page count displayed at the bottom of the main presentation. Basically, the page counter is reset here.
